Meet the team

The Pulmonary Rehab programme is run by physiotherapists and supported by a dietitian, a respiratory consultant, an occupational therapist, specialist respiratory nurses, Age UK, Talking Therapies and Palliative Care.

How to get to your classes

Pulmonary Rehab at Royal Berkshire Hospital is held in the gym in the Inpatient Therapies Department on Level 1 in Battle Block.

We recommend you park in the multi-storey car park off Craven Road – please be aware that spaces are limited so leave plenty of time before your class.

From the car park, enter the hospital via Level 2. Walk past the shops, turn right down the steps/slope into Eye Block, and then continue into Battle Block. Get the lift/stairs down to Level 1. Inpatient Therapies is located on the left across from the Friends café in the conservatory.

Pulmonary Rehab is also held at Palmer Park Leisure Centre on Wokingham Road.

Pulmonary Rehabilitation: helping you manage your lung condition

Information for patients

You have been referred to the Pulmonary Rehabilitation Programme. This leaflet explains what that entails and gives you advice on getting the best out of it.

What is Pulmonary Rehabilitation?

Pulmonary Rehabilitation (often called 'Pulmonary Rehab') is a 6-week programme of exercise and education.

Who is it for?

Pulmonary Rehab is for people with long-term respiratory conditions such as **Chronic Obstructive Pulmonary Disease (COPD)**. It is suitable for people with or without long-term oxygen.

How can Pulmonary Rehab help?

- It can help to manage shortness of breath.
- It can help to build muscle strength.
- It can improve general fitness.
- It can help you understand your condition better

How do I get referred?

- Referred by your respiratory consultant.
- Referred by your GP or practice nurse.
- After a stay in hospital.

How will the Pulmonary Rehab Programme start?

You will receive a phone call appointment to assess if you are suitable for the class. The clinician will explain what happens on the Pulmonary Rehab Programme and when and where it takes place.

What will happen on my first visit?

For your first two visits to Pulmonary Rehab, you will complete some walking tests, before starting your 6-week supervised exercise programme. This allows us to tailor the exercise programme to your own abilities.

What will each class consist of?

Each class will be a circuit-based exercise class that aims to strengthen your muscles and improve your aerobic fitness. Your physiotherapist will teach you to monitor your own breathing during exercise.

What do I need to bring with me to the class?

Comfortable clothes, such as tracksuit bottoms, trainers, reading glasses if you need them, any inhalers you're on and a bottle of water.
