

## Exercises during traction

**Name:** \_\_\_\_\_

**Date:** \_\_\_\_\_

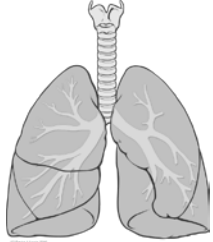

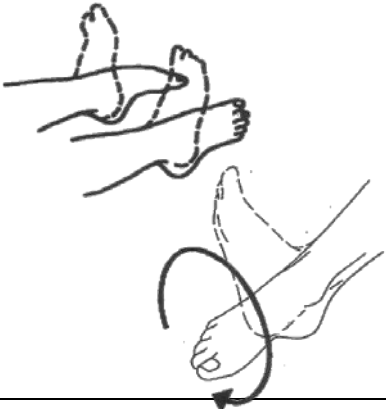

**Leg on traction:**                      **Right**                           **Left**                     

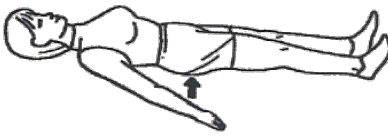

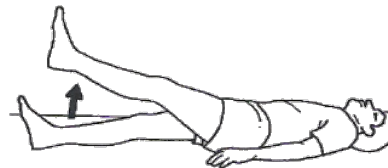

### Introduction

Traction involves steady pulling, and is used to straighten and repair broken bones. It is important that traction is applied at the correct angle so that the ends of the fracture are drawn together perfectly. Methods using weights, counterweights, and pulleys have been developed to provide the appropriate force, while keeping the bones aligned and preventing muscle spasm. During the time when you are in bed, it is important to do some simple exercises to keep your muscles and circulatory system healthy, and get prepared for the time when you can get out of bed.

*The physiotherapist will go through the exercises on the following pages and decide the most suitable for your individual situation. These are ticked in the chart on the following pages.*

## Exercises

<i>Tick = exercises to do</i>	<i>Exercise</i>	<i>Instructions</i>	<i>Diagram</i>
	<b>1. Breathing exercises</b>	<ul style="list-style-type: none"> <li>Breathe in deeply through your nose.</li> <li>Hold for 3 seconds.</li> <li>Breathe out through your mouth.</li> <li>Repeat this 3 times.</li> <li>Do this exercise every hour.</li> </ul>	
Left <input type="checkbox"/>  Right <input type="checkbox"/>	<b>2. Circulatory exercises</b>	<ul style="list-style-type: none"> <li>Bend your ankle and point your toes away from you – do this 20 times ... then ....</li> <li>Circle your ankles clockwise and anticlockwise – pretend you are drawing circles with your toes.</li> <li>Repeat so that you complete 20 circles in each direction.</li> <li>Do this 3 times a day.</li> </ul>	
Left <input type="checkbox"/>  Right <input type="checkbox"/>	<b>3. Static quadriceps</b>	<ul style="list-style-type: none"> <li>Lie with your leg straight out in front of you.</li> <li>Tense your thigh muscles by pushing the knee down into the bed, and pulling your toes towards you.</li> <li>Hold for 10 seconds.</li> <li>Relax and repeat 10 times.</li> <li>Do this 3 times a day.</li> </ul>	
Left <input type="checkbox"/>  Right <input type="checkbox"/>	<b>4. Static hamstrings</b>	<ul style="list-style-type: none"> <li>Bend your knee so it is about 6 inches above the bed.</li> <li>Push your heel down into the bed by tightening the muscle at the back of your thigh.</li> <li>Hold for 10 seconds.</li> <li>Relax and repeat 10 times.</li> <li>Do this 3 times a day.</li> </ul>	

		<ul style="list-style-type: none"> <li>• Tense your buttock muscles.</li> <li>• Hold for 5 seconds.</li> <li>• Relax and repeat 10 times.</li> <li>• Do this 3 times a day.</li> </ul>	
Left <input type="checkbox"/> Right <input type="checkbox"/>	<b>6. Hip flexion</b>	<ul style="list-style-type: none"> <li>• Lie with your legs stretched out in front of you.</li> <li>• Slide the heel towards your bottom and allow your hip and knee to bend.</li> <li>• Slide the heel back down.</li> <li>• Relax and repeat 10 times.</li> <li>• Do this 3 times a day.</li> </ul>	
Left <input type="checkbox"/> Right <input type="checkbox"/>	<b>7. Hip abduction</b>	<ul style="list-style-type: none"> <li>• Lie with your legs stretched out in front of you.</li> <li>• Keep both legs straight and your toes pointed to the ceiling throughout.</li> <li>• Move your leg out to the side as far as possible.</li> <li>• Return to the starting position.</li> <li>• Relax and repeat 10 times.</li> <li>• Do this 3 times a day.</li> </ul>	
Left <input type="checkbox"/> Right <input type="checkbox"/>	<b>8. Straight leg raise</b>	<ul style="list-style-type: none"> <li>• Tighten your thigh muscles and straighten your knee.</li> <li>• Lift leg 6 inches off bed and hold for 10 seconds.</li> <li>• Repeat 10 times.</li> <li>• Do this 3 times a day.</li> </ul>
