

Having a musculoskeletal, neck or testicular ultrasound

Introduction

There is no need to follow any preparation.

A health care assistant will greet you in the ultrasound area and one may be present during your examination. The scan is conducted by a radiologist (specialist X-ray doctor) or a sonographer specialist in ultrasound.

No childcare facilities are available while you have your scan.

If you would like to be chaperoned during the ultrasound examination, please speak to a member of staff in the ultrasound department and a same sex member of staff will be provided.

What is an ultrasound?

An ultrasound scan uses high frequency sound waves to create an image of your body. To date, there are no known documented risks associated with this test.

What happens during the ultrasound?

An ultrasound machine uses sound waves to produce pictures of the body. Warm gel is placed on an ultrasound probe, which is then moved over the skin of the area to be examined. The lights are dimmed to allow the examiner to see the ultrasound screen more clearly. Most examinations last between 10 to 15 minutes.

After the ultrasound

Following the scan, you can leave immediately.

Results

A report of your examination will be sent to your referring doctor usually within 24 hours. If this is a hospital specialist, then the specialist may contact your GP with the report.
