

Having a transabdominal pelvis ultrasound

Introduction

You must drink 1 litre (2 pints) of water 1 hour before the appointment. You must not empty your bladder. Continue to take any prescribed medication as normal. You can eat as normal. A health care assistant will greet you in the ultrasound area and one may be present during your examination. The scan is conducted by either a radiologist (specialist X-ray doctor) or sonographer (specialist ultrasound practitioner).

No childcare facilities are available whilst you have your scan.

If you would like to be chaperoned during the ultrasound examination, please speak to a member of staff in the ultrasound department and a same sex member of staff will be provided.

What is an ultrasound?

An ultrasound scan uses high frequency sound waves to create an image of your abdomen. To date, there are no known documented risks associated with this test.

What happens during the pelvis ultrasound?

An ultrasound machine uses sound waves to produce pictures of the body. Warm gel is placed on an ultrasound probe, which is then moved over the skin of the area to be examined. The lights are dimmed to allow the examiner to see the ultrasound screen more clearly. Most examinations last between 10-15 minutes.

After the ultrasound

Following the scan, you can leave immediately.

Results

A report of your examination will be sent to your referring doctor usually within 24 hours. If this is a hospital specialist, then the specialist may contact your GP with the report.
