

# Sick Day Rules for children with diabetes on basal bolus regime

This leaflet outlines 'Sick Day Rules' for children with diabetes who are on basal bolus regime.

When you are ill your body needs more energy to fight the infection. Glucose is released from your body stores to do this, so the blood glucose tends to go up even if you are not eating. This means that you need more insulin than usual when you are ill. If you do not give enough insulin then your body cannot use the extra glucose so will start to break down fat for energy. When fat is broken down, this produces ketones.

**Ketones are very dangerous!**

## What are ketones?

Ketones are acids which can quickly make you feel very unwell and can make you vomit. They can make you feel breathless. If you do not get rid of the ketones, you can become extremely unwell and would need urgent hospital treatment (diabetic ketoacidosis (DKA)).

**Ketones can still be produced when you are ill even when your blood glucose is low.**

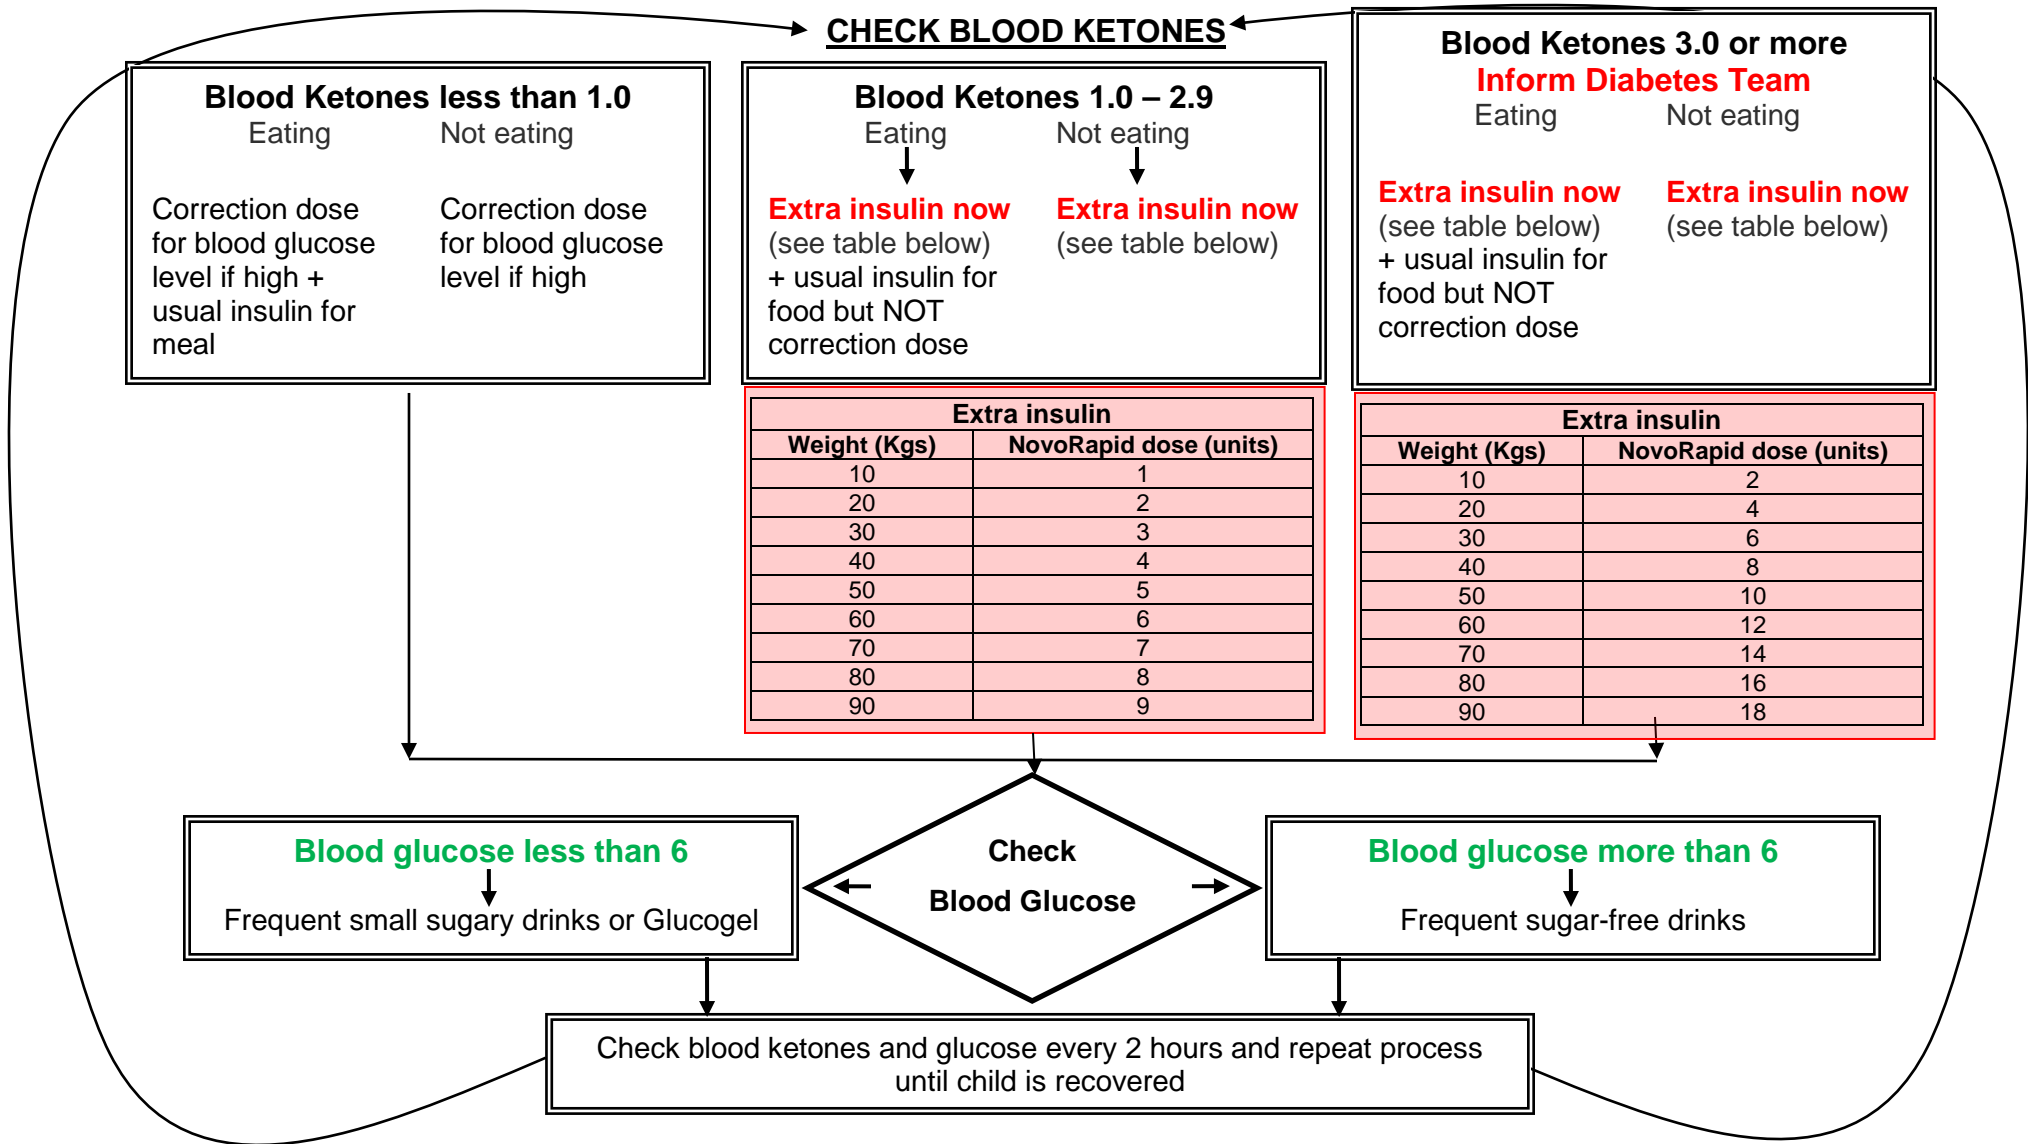

**Therefore:**

- **Never stop your insulin even if you are not eating**
- **Always check for ketones if you feel unwell regardless of your blood glucose level**
- **Inform your Diabetes Team of illness**

This document can be made available in other languages and formats upon request.

Paediatric Unit, October 2017. Review due: October 2019

**ALWAYS GIVE INSULIN GLARGINE (LANTUS) or LEVEMIR + ALWAYS CHECK FOR KETONES REGARDLESS OF BLOOD GLUCOSE**

- Contact team if:**
- Increasingly unwell
  - Ketones more than 3 or persist for more than 6 hours
  - Vomits more than twice
  - You have to give a second extra dose of insulin
  - Unable to maintain blood glucose above 4
  - Worried for any reason

**Phone numbers**

**0118 322 8922 (nurses)**  
**After 8pm 0118 322 5111 and ask to bleep paediatric registrar**
