

## A note from your consultant

Your experience as my patient and the outcome of the treatment you receive is important to me. I am using a new system (Amplitude Clinical Outcomes System) to record your progress but I also need input from you as well.

I will be asking you to complete some simple questionnaires at stages throughout your treatment and also after you've been discharged from my care. This helps me to monitor your progress and the success of your treatment after you have left hospital. The first questionnaire should be completed before you have received any treatment (a sort of 'baseline') and we will email you at intervals after you have been discharged and ask you to complete further similar questionnaires. This could be for a period of years after your treatment so we can assess the long-term success of the treatment you received. It is really important that you complete these questionnaires as far into the future as possible as this allows us to monitor your progress even after you have been discharged. Someone can help you to fill in the questionnaires, but it is really important that the information in the questionnaire comes from you.

If you have any questions please feel free to ask me or a member of my clinical team.

**Thank you**

# Clinical Outcome Data Capture

Putting patients at  
the heart of clinical  
outcomes

## What are clinical outcome measures?

Clinical outcomes are a method of recording and comparing your physical progress and wellbeing, as well as your quality of life, before and after a clinical intervention.

Your experience, as a patient at Royal Berkshire Hospital, and the outcome of your treatment, is important to us.

These outcomes also inform us of the best treatments to offer future patients and may feed into formal research trials.

All healthcare processes abide by the General Data Protection Regulation (GDPR) and your consultant is registered with the ICO (Information Commissioners Office) as a data controller. Your data is completely secure and will not be shared identifiably without your permission.

## Why be a part of it?

By inputting your progress in our system, you are not only helping us by giving us the ability to report on all of our patients, but you are also helping yourself.

Clinical outcomes are a way for you, your surgeon and other healthcare professionals to monitor your symptoms and the quality of our clinical interventions.

## How it works

**Patient has appointment with their consultant and is referred for treatment.**

**Patient completes pre-operative scores from home before treatment.**

**Patient receives medical intervention/treatment from consultant or clinical team.**

**Consultant completes the procedure/treatment form within the Trust system.**

**Patient completes all post-operative scores from home at set intervals after treatment.**

## Like to discuss things further?

Your clinical data is really important to us here at Royal Berkshire Hospital and we appreciate your assistance in providing your responses. If you would like to discuss any other aspect of your clinical outcomes, please contact us on:
