Prostate exam clinic:

Radical prostatectomy patient plan

This folder provides you with information regarding your diagnosis, treatment plan and follow-up, as well as contact details and information regarding the team involved in your care.

Please bring this document to all urology hospital appointments and use the table to fill in any PSA blood results.

This plan belongs to: _____

Hospital number: _____

Consultant in charge of care: _____

Presenting PSA: _____

Date of operation: _____

Diagnosis: **Right** **Left**

Gleason: _____ _____

Stage: _____ Margins positive Y/N _____

Information

What is PSA?

PSA stands for Prostate Specific Antigen. This is a naturally occurring substance measured by a blood test and is used to monitor activity from the prostate cells in the body.

What is Gleason grade?

If there is prostate cancer in your biopsy samples, they are given a Gleason grade. This grade tells you how aggressive the cancer is – in other words, how likely the cancer is to grow and spread outside the prostate. When cancer cells are looked at under the microscope, they have different patterns, depending on how quickly they are likely to grow. The pattern is given a grade from 1 to 5. This is called the Gleason grade. If a grade is given, it will usually be 3 or higher, as grade 1 and 2 are not cancer.

An overall Gleason score is worked out by adding together two Gleason grades. The first is the most commonly seen grade in all the samples (i.e. representing the 'typical' grade). The second is the highest grade seen in the sample (i.e. indicating the grade in the most affected cells). When the most common and the highest grade are added together, the total is called the Gleason score.

What is telephone clinic?

The hospital will send you an appointment time and date through the post. Instead of attending the outpatient clinic we will call you on your preferred number with the result of your PSA test. You will need to make sure withheld numbers are not blocked and be available at the time and date stated on your letter.

Further information is available through your nurse specialist or at www.prostatecanceruk.org

Follow-up summary

Individual plan after first postoperative review

Please have PSA blood test between 2 weeks and 72 hour before appointment.

Time point	Patient action
3 months	Please have PSA blood test, meet your GP to discuss medication to help with erections if appropriate and continue with pelvic floor exercises. You will receive an appointment to be seen by a member of the Urology team.
6 months	Please have PSA blood test and continue with pelvic floor exercises. You will receive an appointment to be seen by a member of the Urology team.
9 months	Please have PSA blood test and continue with pelvic floor exercises. You will receive an appointment to be seen by a member of the Urology team.
12 months	Please have PSA blood test. Inform your urologist at this appointment if you are still using incontinence pads. You will receive an appointment to be seen by a member of the Urology team.
16 months	Please have PSA blood test and be available for your telephone appointment.
20 months	Please have PSA blood test and be available for your telephone appointment.
24 months	Please have PSA blood test and be available for your telephone appointment. We would normally discharge you at this point.
From 24 months to 5 years after surgery	Please have a PSA blood test every 6 months, and you will receive your result through the post or email. We would normally discharge you back to your GP at 5 years.
After 5 years	Please have a PSA blood test every 12 months, add the PSA result to the chart enclosed and make an appointment with your GP if the PSA increases above 0.2.
